This is a textbook for a course (or self-instruction) in cryptography with emphasis on algebraic methods. The first half of the book is a self-contained informal introduction to areas of algebra, number theory, and computer science that are used in cryptography. Most of the material in the second half - "hidden monomial" systems, combinatorial-algebraic systems, and hyperelliptic systems - has not previously appeared in monograph form. The Appendix by Menezes, Wu, and Zuccherato gives an ...

Algebraic Attacks against Block Ciphers "Algebraic Attack": typically refers to the technique of expressing the whole cryptosystem as a large system of multivariate polynomial equations. In principle applicable to both block ciphers and stream ciphers. Two steps: Obtain a representation of the cipher as a system of equations.

This book is intended as a text for a course on cryptography with emphasis on algebraic methods. It is written so as to be accessible to graduate or advanced undergraduate students, as well as to scientists in other fields. The first three chapters form a self-contained introduction to basic concepts and techniques. Here my approach is intuitive

and informal. For example,
