As a result of "grow more food" campaigns ornamental plants at the present time are receiving comparatively little attention. When they come into full favour again more attention will have to be given to their pests and diseases, which not only affect those host plants, sometimes resulting in heavy losses to nurserymen, but also often occur on food plants so that the chances of pests and...

Ornamental Pests and Diseases Mealybugs - are insects found in moist, warm climates. They are considered pests as they feed on plant juices of greenhouse plants, house plants and subtropical trees and also act as a vector for several plant diseases. Mealybugs tend to congregate in large numbers, forming white, cottony masses on plants.

Many leaf diseases on ornamental grasses begin in spring and then may continue into summer if temperatures are not excessive for their unique needs. Rusts are more visible late in the growing season on these crops. Root rots may occur any time, but overfertilization can be a trigger for water molds and fungi to invade roots.
