Domain Referenced - Psychometric Glossary. This refers to assessing the subject's performance on a test on the extent to which it fulfils the requirements of a particular 'domain' (e.g. 'accountancy knowledge'), rather than how the subject has done against other people who has sat the test in the past. Since the performance of a subject on a certain type of test can be related to their ability to perform on a particular job or task, a domain referenced test takes into account what ...

The central assumption in domain-referenced testing (DRT), as presented in this book, is that a domain may be determined which adequately represents a particular universe of knowledge. After a domain has been established, the technological and practical problem of using domain-referenced testing must be solved. This book contains a collection of twelve short chapters covering such DRT topics as definition and function; sampling plans; instructional accountability; curriculum assessment ...

Domain-referenced, or criterion-referenced, test interpretation is the concept that an examinee's scores on a test are interpreted with reference to the particular cognitive ability being assessed rather than in comparison with the performance of a population of individuals (norm-referenced testing). For example, when examining reading ability, domain-referenced interpretation is exemplified when a neuropsychologist interprets an examinee's performance in terms of reading mastery or how ...

Norm-referenced tests are designed to rank test takers on a "bell curve," or a distribution of scores that resembles, when graphed, the outline of a bell—i.e., a small percentage of students performing poorly, most performing average, and a small percentage performing well. To produce a bell curve each time, test questions are carefully designed to accentuate performance differences among test takers—not to determine if students have achieved specified learning standards ...

A criterion-referenced test is a style of test which uses test scores to generate a statement about the behavior that can be expected of a person with that score. Most tests and quizzes that are written by school teachers can be considered criterion-referenced tests. In this case, the objective is simply to see whether the student has learned the material. Criterion-referenced assessment can be contrasted with norm-referenced assessment and ipsative assessment. Criterion ...

Standards-based education reform focuses on criterion-referenced testing. Most everyday tests and quizzes taken in school, as well as most state achievement tests and high school graduation examinations, are criterion-referenced. In this model, it is possible for all test takers to pass or for all test takers to fail. Advantages and limitations. The primary advantage of norm-reference tests is ...
