OpenShift blog | Machine Learning

Learning openshift: a good moment to revisit awk too I can't believe I spent all these years using only grep. Most of us know how to use awk to print the nth column of a file: \$ awk '{print \$1}' /etc/hosts will print all IP addresses from /etc/hosts. But you can also do filtering before printing the chosen column: \$ awk '\$5 >= 2 {print \$2}' /path/to/file will print the second column of all ...

::meta syntax::: Learning openshift: a good moment to ...

OpenShift is a new generation of container management platforms built on top of both Docker and Kubernetes. It brings additional functionality to the table, something that is lacking in Kubernetes. This new functionality significantly helps software development teams to bring software development processes to a whole new level.
