Occupational Toxicology

Occupational (or industrial) toxicology is the application of the principles and methodology of toxicology to understanding and managing chemical and biological hazards encountered at work. The objective of the occupational toxicologist is to prevent adverse health effects in workers that arise from exposures in their work environment.

Occupational toxicology - Wikipedia

occupational toxicology Occupational toxicologists assess the hazards and risks to health posed by chemicals encountered in the workplace. Many of the chemicals that occupational toxicologists must deal don't cause an appreciable risk to health when they are present at low levels in food, consumer products and the environment.

actual workplace conditions. For occupational toxicology, this means exposure by inhalation and/or dermal routes. It also means a strong interest in conducting studies on toxic interactions of chemicals. One seldom finds a worker exposed to a single chemical. Other potential interactive fac-

Occupational Toxicology: NIOSH Perspective

Occupational toxicology is the application of toxicology and risk assessment to protecting employees from health effects resulting from exposure to compounds/agents in their workplace. Occupational toxicologists strive to prevent adverse health effects in workers which are a result of exposures from their work environment.

What is Occupational Toxicology? | Occupational Toxicology ...

Occupational toxicology is a specialty field of clinical toxicology that investigates and applies the principles of toxicology to potential exposures to chemical and biological toxicants in the workplace. The effects of such exposures can have both acute and chronic long-term implications on the health of the individual.

Occupational Toxicology | UF Clinical Toxicology Online ...

Occupational Toxicology Although a number of U.S. organizations develop occupational exposure limits (OELs), much of the effort has focused on a relatively small subset of high volume chemicals, or those with particularly severe toxic end points.

Occupational Toxicology. Occupational Toxicology deals with the toxicity of chemicals found in work place. Eg. Industrial workers may be exposed to these agents during the synthesis, manufacturing or packaging of substances. Occupational toxicologists may also define and carry out programs for the surveillance of exposed workers and the environment in which they work.

Occupational Toxicology | List of High Impact Articles ...

The field of occupational toxicology covers the use of chemicals in a workplace setting and includes the study of both raw materials and process emissions as possible hazards to human health. Work-related exposures are studied by use of inhalation and skin exposure monitoring as well as biomarkers of exposure, susceptibility and effect, usually as part of epidemiological exposures. Results of such studies and also from experimental exposure studies contribute to the setting of ...
