Object detection deals with detecting instances of semantic objects of a certain class (such as humans, buildings, or cars) in digital images and videos. Object detection has applications in many areas of computer vision, including image retrieval, face detection (see Fig. 11.3) and video surveillance.

Semantic Object - an overview | ScienceDirect Topics

Semantic Object: Represents a business entity such as a customer, a sales order, or a product. Using semantic objects, you can bundle applications that reflect a specific scenario. They allow you to refer to objects in a standardized way, abstracting from concrete implementations of these objects. You can either use semantic objects shipped by SAP, or create new semantic objects.

Semantic models also include meta-data--data that help to organize other data. When the information is federated from multiple sources, the RDF data model allows one to represent all the data in a single, uniform way. A semantic model acts as a sort of glue between disparate, federated data sources, so they can be described as how they fit ...

Semantic Data Modeling

Semantic data model (SDM) is a high-level semantics-based database description and structuring formalism (database model) for databases. This database model is designed to capture more of the meaning of an application environment than is possible with contemporary database models. An SDM specification describes a database in terms of the kinds of entities that exist in the application environment, the classifications and groupings of those entities, and the structural ...

The semantic data model is a method of structuring data in order to represent it in a specific logical way. It is a conceptual data model that includes semantic information that adds a basic meaning to the data and the relationships that lie between them. This approach to data modeling and data organization allows for the easy development of application programs and also for the easy maintenance of data consistency when data is updated.
