Thermodynamic Formalism And Holomorphic Dynamical Systems

These two theories are strongly linked: The laws of thermodynamics happen to be an extremely powerful tool for understanding the objects of holomorphic dynamical systems. A "thermodynamic formalism" has been developed, bringing together notions that are a priori unrelated. While the deep reasons of this parallelism remain unknown, the goal of this book is to describe this formalism both from the physical and mathematical point of view in order to understand how it works and how useful ...

The laws of thermodynamics happen to be an extremely powerful tool for understanding the objects of holomorphic dynamical systems. This book develops a 'thermodynamic formalism', bringing together notions that are a priori unrelated. It describes this formalism both from the physical and mathematical point of view.

I know only Zinsmeister's short "Thermodynamical formalism and holomorphic dynamical systems", which is concerned mostly with holomorphic dynamics, and Ruelle's "Thermodynamical formalism", which is, alas, too dense and has very little intuition.

thermodynamic formalism holds for every hyperbolic map from M to M . We also study a particular family of entire functions called Poincaré functions studied previously in [12, 28, 14] among others. If $p: \mathbb{C} \rightarrow \mathbb{C}$ is a polynomial and if $z_0 \in \mathbb{C}$ is a repelling fixed point of p then there exists an entire function $f: \mathbb{C} \rightarrow \mathbb{C}$ such that $f(p(z)) = p(f(z))$...
